

## High-Performance Special Shaped Carbide Knives & Blades

OYEA has its own pressing and sintering workshops for professional production of tungsten carbide circular blade, long knife, toothed knife and special shaped blades that can be customized according to customers' drawings and requirements.

## Types

OYEA specializes in the production of various types of  $\phi 20$ - $\phi 350$  tungsten carbide circular slitting blades, which are widely used in paper, corrugated cardboard, plastic film, tobacco, asbestos tile, electronic circuit boards, textiles, non-ferrous metal slitting industries etc.

Carbide slitting blades are applicable for

slitting of chemical fiber, tobacco,  
carpentry, steel wire, ceramics, etc.

The special shaped carbide blades &  
machine knives include slotting cutters  
and back milling cutters, applied to paper,  
printing, package industries etc.

## Advantages

High hardness, generally 86-93 HRA;  
excellent wear resistance.

Good hot hardness.

High precision and long service life.

## Customization

OYEA can help process all kinds  
of carbide blades according to customers'  
drawings, providing customers with high  
quality and high cost performance  
tungsten carbide series products.
