

**HI-TACK
TIMBER**

GANS PRESENTS: **HI-TACK TIMBER™**

Gans Digital's HI-TACK TIMBER is our premium Wood Grain Film that is compatible with Latex, Solvent, and UV printers.

Gans' exclusive HI-TACK TIMBER Premium Wood Grain Film is strikingly natural and appealing. What makes HI-TACK TIMBER unique is the physical imprint of texture, creating a realistic and stylish wood finish. Our high quality Wood Grain Film can be a substitute for, or compliment to, more expensive natural and synthetic finishes. Our self-adhesive HI-TACK TIMBER comes with a unique adhesive backing that can be applied to virtually any flat or simple curved surface including walls, ceilings, floors, furniture, elevators, automobiles, and more. You can also cut our HI-TACK TIMBER in to custom shapes and letters for a more unique end product.

FACT SHEET

What is HI-TACK TIMBER?

HI-TACK TIMBER is a micro-thin architectural overlay with a permanent pressure-sensitive adhesive backing. HI-TACK TIMBER is sometimes referred to as architectural film, interior film, architectural finishes, or surface coverings. HI-TACK TIMBER can be applied to any non-porous surface in various commercial renovations or new construction projects. HI-TACK TIMBER comes in multiple embossed patterns that emulate natural wood.

What can HI-TACK TIMBER do?

HI-TACK TIMBER represents an entirely new opportunity for commercial architects and interior designers to achieve unprecedented design flexibility, high-quality visual appeal and ease of installation and maintenance, especially when working with tight budgets. HI-TACK TIMBER provides an unmatched combination of affordability, durability and flexibility.

Some of the design and aesthetic benefits include:

- o Unprecedented flexibility to achieve your vision within your budget.
- o An astounding aesthetic alternative to costly natural materials.
- o The ability to be printed with customized graphics or colors before installation.

What are the ideal applications for HI-TACK TIMBER?

HI-TACK TIMBER is ideal for commercial spaces where frequent design changes, tight timelines, and efficient budgets are necessary to present a fresh look without the inconvenience of lengthy and messy construction. Ideal applications across all industries include doors, walls, columns, millwork, elevators, ceilings, RV's, marine, aviation, cars and more!

What surfaces can HI-TACK TIMBER be used on?

HI-TACK TIMBER can be installed on virtually any smooth, non-porous surface. The most common surfaces are plastic laminate, high-pressure laminate, metal, melamine, polished stone, glass, and sealed wood. HI-TACK TIMBER can also be applied to smooth porous surfaces that have been properly prepped. Although HI-TACK TIMBER cannot be directly installed on rough surfaces like brick or concrete, Gans Digital has several solutions for covering these areas as well.

How much does HI-TACK TIMBER cost?

HI-TACK TIMBER is designed to deliver on your vision at a fraction of the cost of traditional materials. HI-TACK TIMBER also allows you to reuse existing surfaces and substrates rather than ripping them out and replacing them with new materials. Using HI-TACK TIMBER also **saves you money** on construction costs by greatly reducing construction timelines. HI-TACK TIMBER allows you to get the look you want at a price you can afford.

Rolls come in two standard sizes; custom sizing available.

48"x98' \$499

24"x98' \$325
