

*No Cables, Clips, or Bars to Grip...  
No Gromets, Wrinkles, Tracks or Rips!*

***SignSpring for Banner, Sign and Fabric  
Graphics Industry***

## ***SignSpring*** is...

- A division of Lind Media Company, operator of 800+ posters, bulletins and wallscapes in Ohio.
- A breakthrough system for installation of fabric graphics for billboards, banners, wallscapes and on-premise signage.
- Excited to share ***BannerSpring, BannerFrame*** and ***PosterSpring*** with the entire Outdoor & Sign industries.

**LIND**  
**SignSpring™**  
BannerSpring - BannerFrame - PosterSpring

# THE STORY

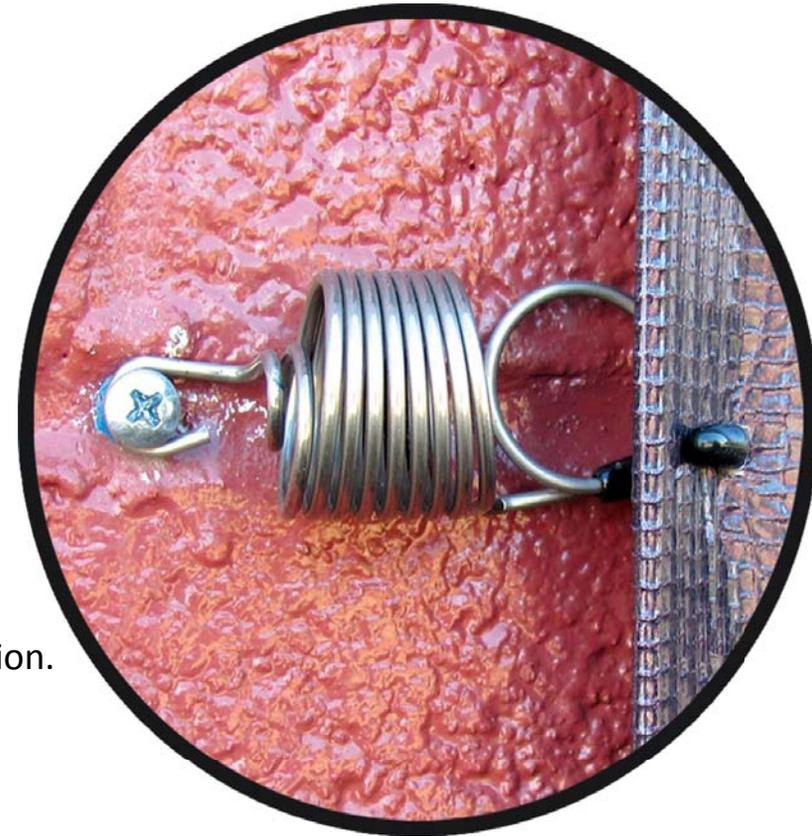

After experimenting with all banner, vinyl and PE poster installation systems, Lind Media knew it could develop a better product.

We wanted to avoid using ratchets, gripper bars, cables, pulleys, plastic clips, and tracks and quickly discovered that engineered spring and hook technology was far superior to all other methods.

After 5 years of development and proven usage worldwide, SignSpring is the most durable and cost effective fabric graphic installation system on earth. Unequaled from the largest urban wallscapes & billboards to banners, windows P-O-Ps and cabinet displays.

# ***BannerSpring***

- Developed and proven on Billboards in extreme Great Lakes conditions
- Trampoline simplicity, large billboard durability.
- Spring/Hook technology means NO grommets, cables or clips.
- No tools, tracks, gripper bars, ratchets, cables or clips.
- Tight, flawless installations & quick easy change-outs.
- Lay Flat Design Prolongs banner life while enabling easy re-use and rotation.
- Maintains infinite, consistent pressure around display surface.
- Provides flawless appearance whether posting period is 4 weeks or 4 years

# Grommets are for Amateurs!

**LIND**  
**SignSpring**<sup>™</sup>  
PATENTED  
FABRIC GRAPHIC INSTALLATION SYSTEM  
BannerSpring • BannerFrame • PosterSpring

**“NO CABLES, CLIPS OR BARS TO GRIP.....**

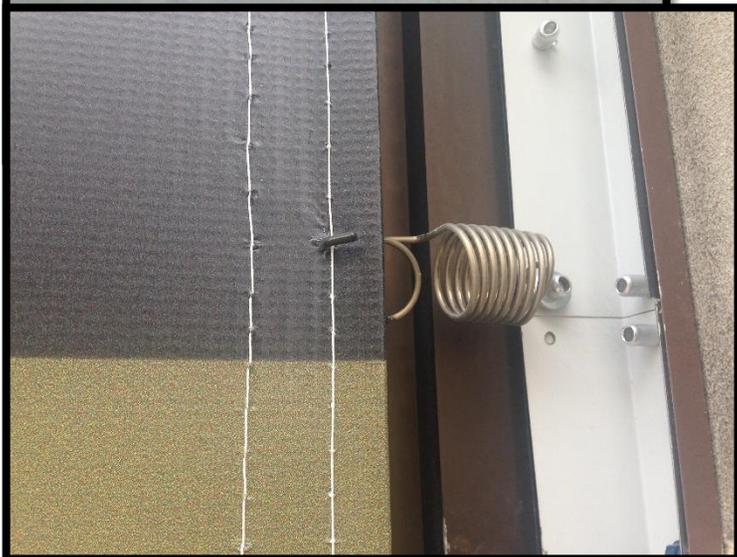

**....NO GROMMETS, WRINKLES, SAGS OR RIPS!”**

NO Grommets Ever. It's true and it's proven. Engineered spring and hook technology means no grommets, cables, channels, or bars.

Like a trampoline, SignSpring generates continuous spring tension that is distributed evenly around the perimeter of the fabric graphic. Simply install BannerSprings at 1' intervals, pulling the spring tips through the vinyl. The pressure is even and infinite, providing a tight, wrinkle-free, sag-free appearance, whether your display period is 5 weeks or 5 years.

SignSpring provides a durable, flawless surface with easy change-outs, enabling sign companies to establish lucrative rotation contracts with their clients.

Developed for billboards ranging from hi-rise freeway bulletins to multi-story urban wallsapes, SignSpring performs flawlessly.

# Perfection is only half the Story!

**SignSpring** provides SIGNIFICANT savings in man-hours and installation costs. No hardware, rods, grommets, tracks or accessories means out of the box installation on site usually with a single installer in under 2 hours. Vinyl change-outs occur in about 5 minutes or less.

**SignSpring** provides SIGNIFICANT competitive advantage in aesthetics, rotation and fabric graphic re-use. Limited protrusions and tension means vinyl and PE last much longer and are suited for easy rotation and re-use.

*BannerFrame...Simplicity. Versatility. Durability. Perfection!*

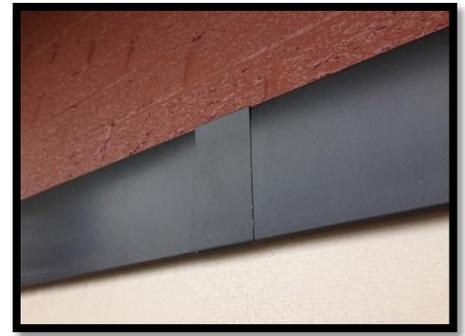

**BannerFrame Pictorial Installation Instructions(9-13-15)**

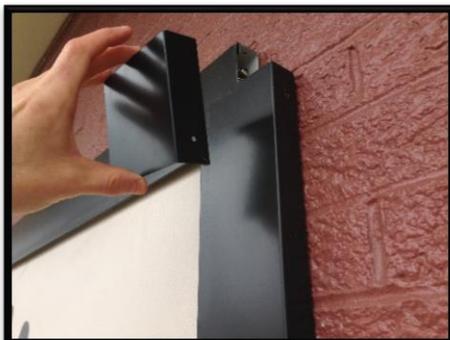

Mark Banner Perimeter and Install BannerFrame Base Channel 1.5" off line. Install graphic placing spring tips into pre marked holes

Install BannerFrame Cover Sections and Seam Covers Install small metal screws into matching holes on BannerFrame sides.

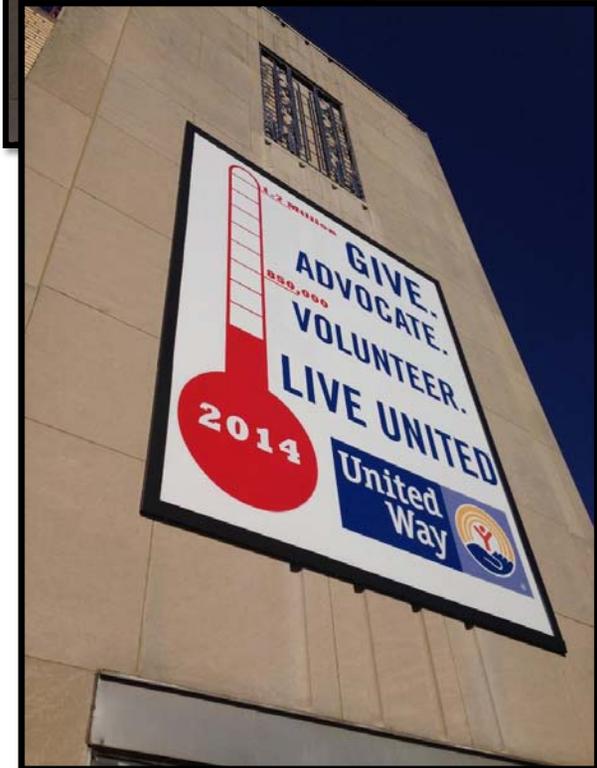

Install Corner Covers

## BannerSpring Fabric Graphic Print & Finishing Instructions (8-26-15)

### Step 1: Mark the Mark-line

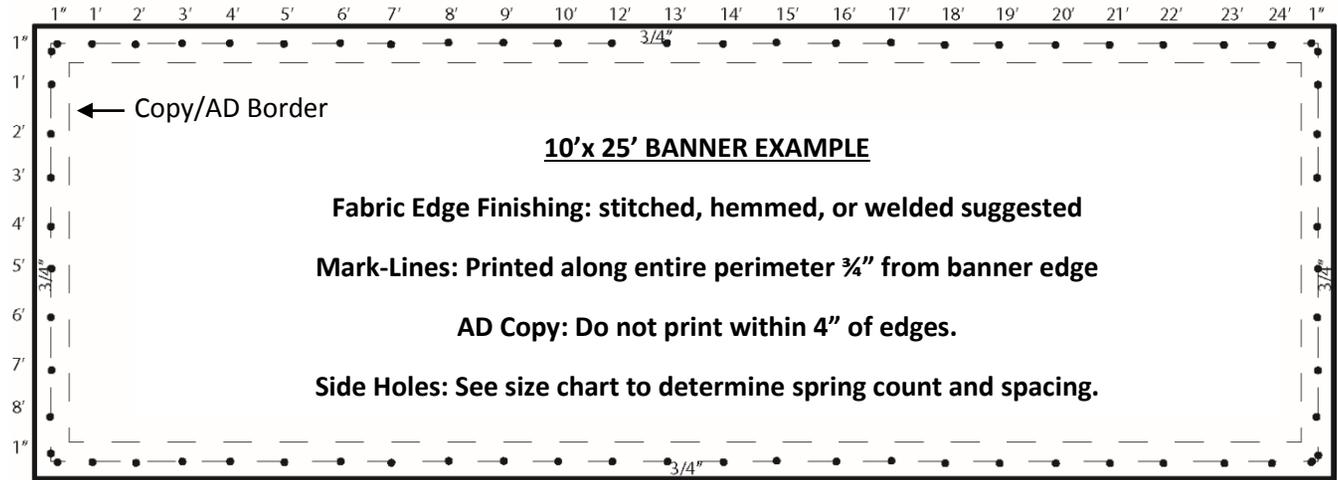

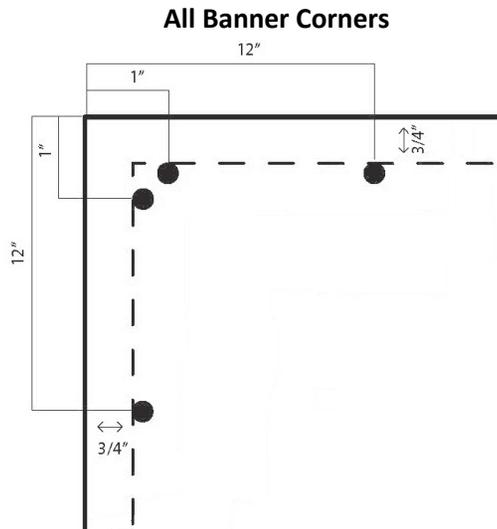

Print or sketch a thin line around the entire banner perimeter,  $\frac{3}{4}$ " inside the banner edge.

### Step 2: Mark and Insert Corners Holes

Mark and punch  $\frac{1}{8}$ " holes as shown below for each corner. Holes are always  $\frac{3}{4}$ " in from Banner edges and should occur on the Mark-Line described above.

### Step 3: Mark holes on the 4 Sides

Mark and punch  $\frac{1}{8}$ " holes along the Mark-line ( $\frac{3}{4}$ " in from banner edge) using the prescribed spring spacing 1' intervals.

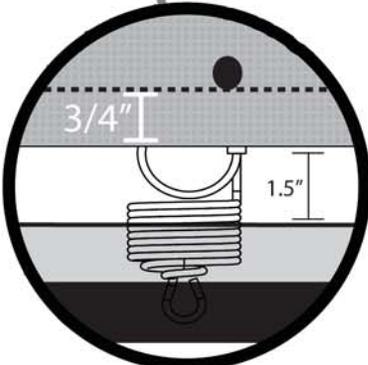

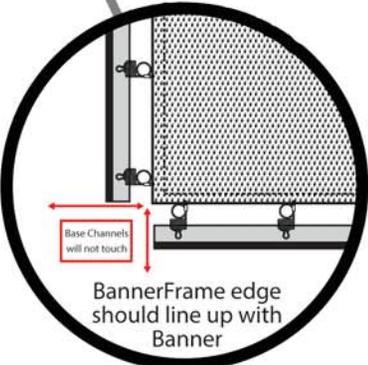

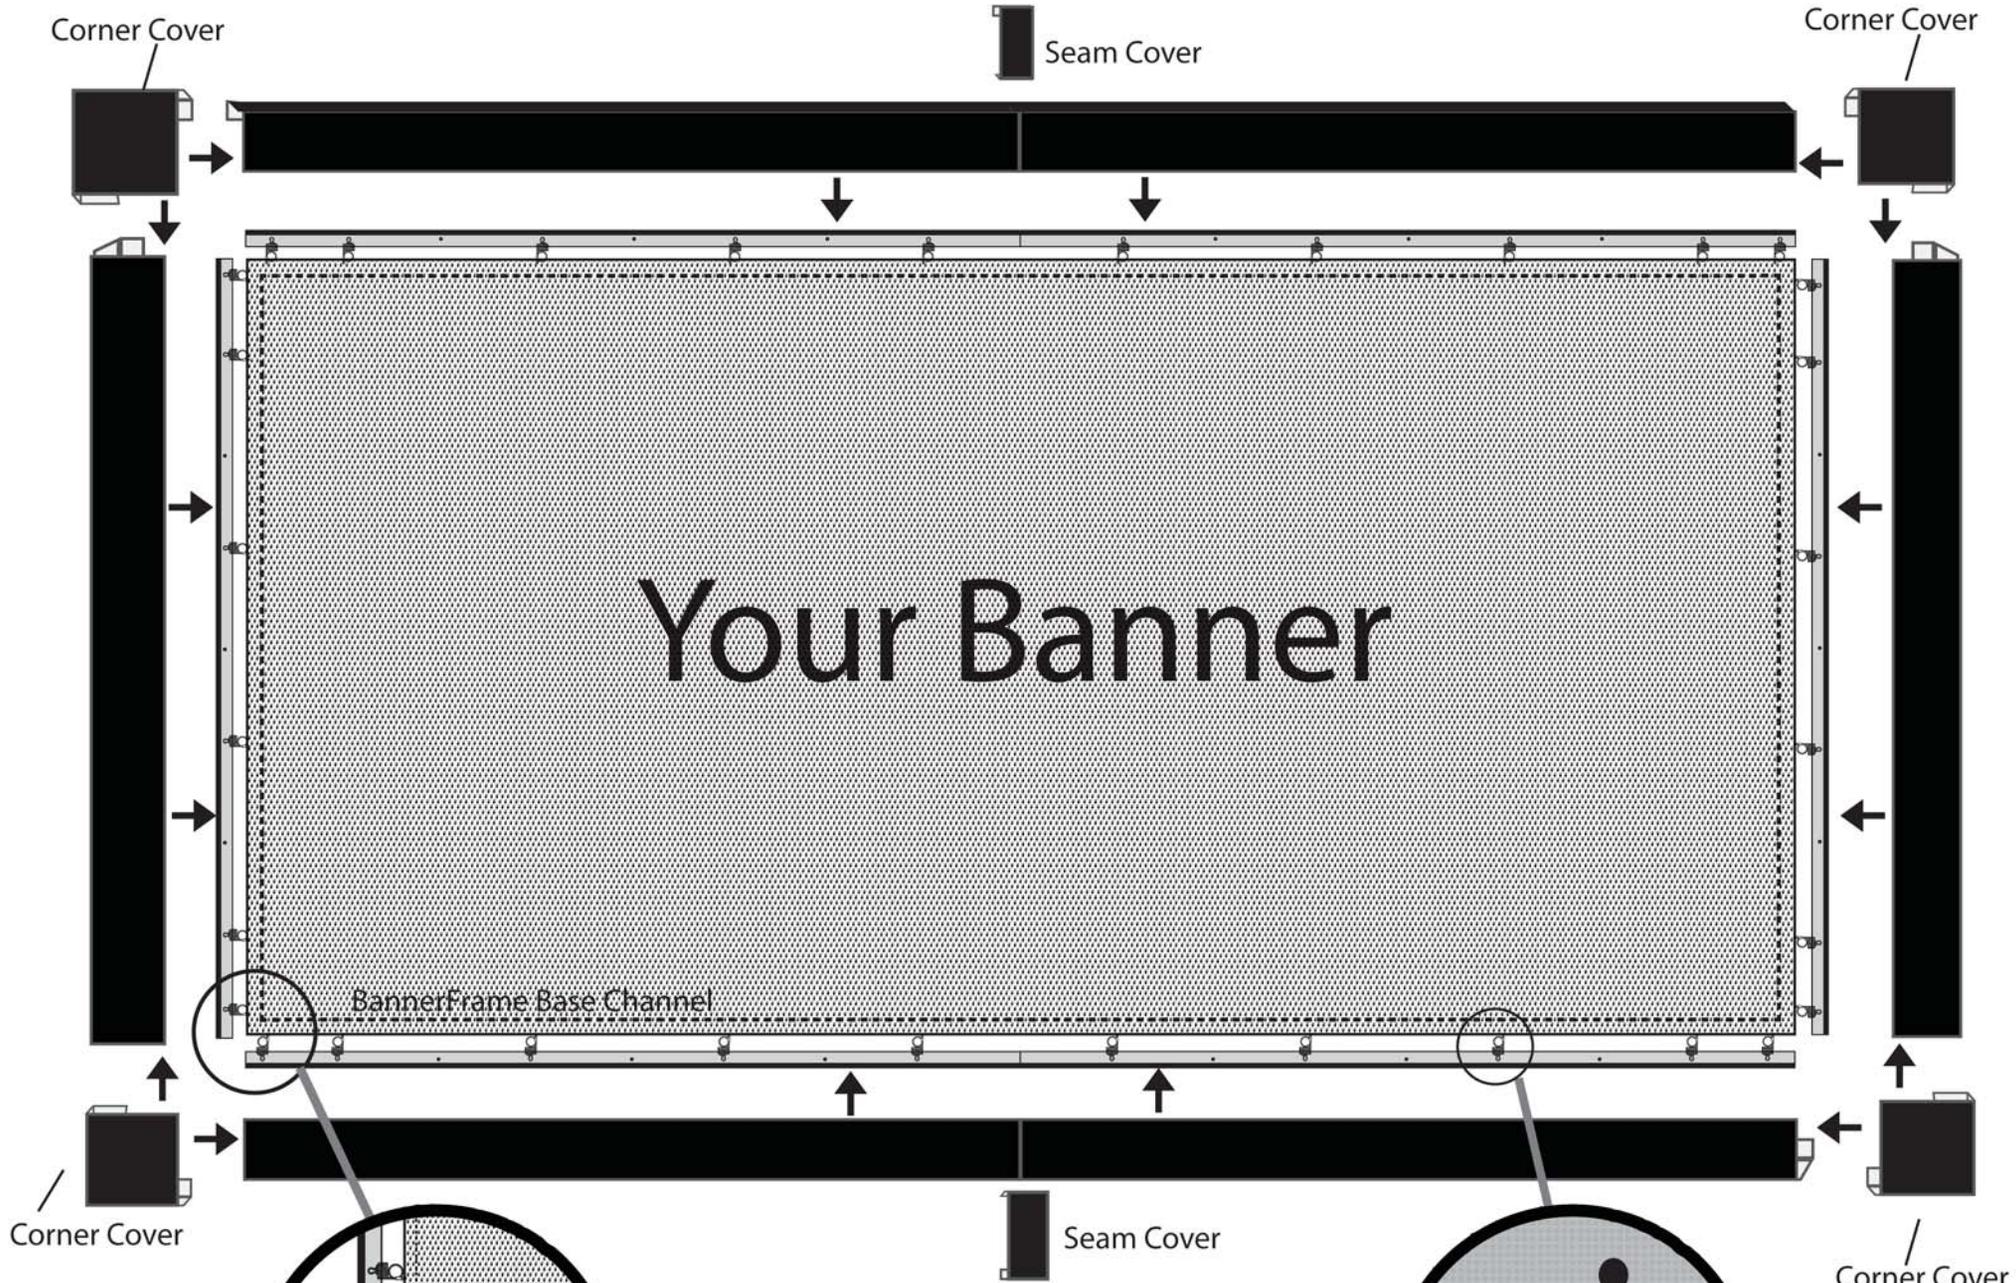

**Substrate:** Lind SignSpring Group suggests 7 oz. for vinyl for most applications. However, SignSpring performs well on heavier vinyl along with mesh, backlit, PE and most fabric graphic substrates.

**Finishing:** For best results, edges should be stitched, hemmed, or welded to avoid edge-curl. Do not use grommets.

**Printing:** Artwork and Final printing should include a mark-line bordering the entire graphic,  $\frac{3}{4}$ " inside the banner edge. The holes may also be marked or inserted as part of the printing process. If using BannerFrame, remember that approximately 3" of vinyl perimeter will be covered by BannerFrame Cover. As such, do not print AD copy within 3" of edge.

**Lind SignSpring Group** provides graphic fulfillment that includes pre-markings and protrusions to assure efficient installation and flawless results.

**NOTICE**

INSTALL ONLY IN ACCORDANCE WITH LOCAL BUILDING CODES AND LOCAL ENGINEERING REVIEW & APPROVAL.

## **BannerFrame Fabric Graphic Print & Finishing Instructions** (9-15-15)

### **NOTICE**

INSTALL ONLY IN ACCORDANCE WITH LOCAL BUILDING CODES AND LOCAL ENGINEERING REVIEW & APPROVAL.

### **Step 1: Mark the Mark-line**

Print or sketch a thin line around the entire banner perimeter,  $\frac{3}{4}$ " inside the banner edge. All punch holes should be placed on mark-line

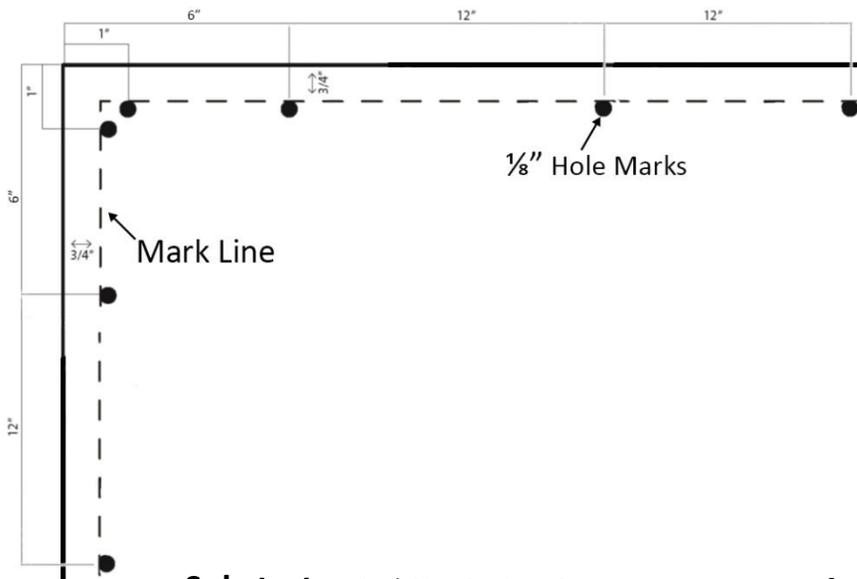

### **Step 2: Mark Punch-Holes around Banner Perimeter on Mark-Line On Each of the 4 sides.....**

Place your first dot 1" in from the banner edge along the Mark-Line

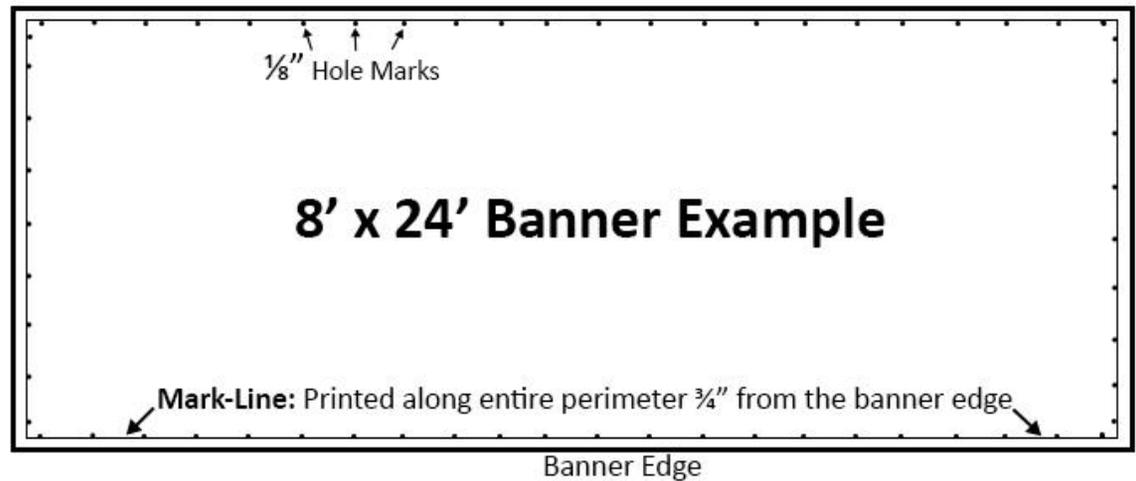

Place your second dot 6" in from the banner edge also along the Mark-Line

All additional dots should be spaced at 1' intervals until you reach the end of the banner where the dots should be 6" and 1" from the edge respectively.

**Corner Piece/Zoom**

**8' x 24' BANNER EXAMPLE**

**Substrate:** Lind SignSpring Group suggests 7 oz. for vinyl for most applications. However, SignSpring performs well on heavier vinyl along with mesh, backlit, PE and most fabric graphic substrates and thicknesses.

**Finishing:** For best results, edges should be stitched, hemmed, or welded to avoid edge-curl. Do not use grommets.

**Printing:** Artwork and Final printing should include a thin printed line bordering the entire graphic,  $\frac{3}{4}$ " inside the banner edge. The holes may also be marked or inserted as part of the printing process. BannerFrame Cover Sections will cover 3" around the Banner perimeter. Avoid printing copy within 5" of Graphic Edge.

Packaging Contents also include detailed step-by-step instructions and unlimited telephone support

## **BANNERSPRING AND BANNERFRAME FREQUENTLY ASKED QUESTIONS**

### **Will BannerSpring work on all Sizes and types of wall and sign surfaces?**

YES. From tiny 4x8 banners to 14x48 and 16x68 wallsapes and billboards and even round vinyls, BannerSpring is designed to work easily on all areas that would accommodate vinyl and PE signage. Great in open frame areas as well as on walls or even over existing sign faces. The compact design of BannerSpring enables a tight installation for your vinyls while remaining fairly obscure. Adding BannerFrame to the perimeter of the display is an easy way to completely hide the springs while creating an even better signage experience. BannerSpring and BannerFrame provide outstanding installations on all sign surfaces from large wallsapes, to small point of purchase displays.

### **How difficult is it to install the BannerSpring and BannerFrame systems?**

Very easy, in most cases, a cordless drill, proper screws and tape measure is all that is required.

### **Is the BannerSpring and BannerFrame system eco-friendly?**

Absolutely, BannerSpring and BannerFrame enable banners to last much longer and to even become permanent signage solutions. Easy rotation and re-use of vinyl mean that "One and done" does not have to apply when using the system.

### **Is BannerSpring/BannerFrame durable and maintenance free?**

Yes. Designed for and used on large high-rise billboards, BannerSpring has stood the test-of-time. Made in Ohio entirely of durable engineered Stainless Steel, each BannerSpring is an independent member of an overall system of springs with no plastic components whatsoever. While we have not seen a spring failure in over two years of use, each piece is easily replaceable simply by changing out an individual spring. You can expect long trusted service whether changing banners frequently or maintaining the same vinyl for extended periods.

### **Do BannerSpring and BannerFrame require grommets on our banners or special perimeter finishing?**

Absolutely not, BannerSpring only requires very limited protrusions into the perimeter of the banner surface. Each spring has a padded hook tip that prevents rips while holding the vinyl banner extremely close and tight to the wall or sign surface resulting in maximum vinyl life span.

### **Are there any special requirements when having banners printed?**

No. While you could have your banner vendor pre-punch perimeter holes to our specifications, you can easily do the job yourself with our SpringGrab tool. Lind Outdoor orders and uses vinyls and banners from many vendors each of whom have their own designated systems. The beauty of the BannerSpring system is that it works with EVERY banner type and finishing technique on the market.

### **What is the typical prep time and process for each banner installation?**

None, drop shipped banners for local and national clients go directly from the shipping box to installation location with absolutely no prep time. No gripper bars, cables, grommets or clips. Just the installer using the tools mentioned above.

### **Can Banners be easily changed or rotated and re-used with BannerSpring?**

Yes. The typical on premise banner display can easily rotate and change as often as desired because of the simplicity of BannerSpring and BannerFrame. Banner life is also extended as the BannerSpring requires limited protrusions into the perimeter while holding the vinyl extremely close and tight to the surface resulting in maximum banner life span. BannerFrame takes this one step further by hiding and protecting the banner perimeter.

### **How can BannerSpring and BannerFrame benefit Sales?**

Whether you are a sign industry professional or a direct user, BannerSpring and BannerFrame create revenue possibilities that are endless. From large wallsapes to small temporary banners, the system allows easy change-outs that can result in increased sales via a rotary banner program and increased sales for the end-user that enable fresh professional looking banners with seasonal up-to-date content that can pull traffic and drive sales. Tight, sag-free installations equal happy customers and clients. The ability to easily change-out banners and re-use them can result in increased banner sales and more placement options.

### **About what does each system cost?**

We use (1) BannerSpring for each corner and (1) BannerSpring each 1.5 linear feet around the perimeter. Thus a 4x8 banner would require (14) BannerSprings. At approximately \$2.00 per spring, BannerSpring is not only the most effective system, it is also the most affordable to purchase, install and operate.

### **How would you summarize BannerSpring and BannerFrame?**

It really is a great product for both temporary and permanent applications. We are not aware of a better system.

**Fabric Graphic Fulfillment Pricing**

(7 or 10 oz(300 dpi vinyl) with proper SignSpring sizing and pre marked perimeter protrusions.  
Distributor Levels determined by orders within trailing 12 month period.

Distributor Level 1.	\$1.80/square foot
Distributor Level 2.	\$1.70/square foot
Distributor Level 3.	\$1.60/square foot
Distributor Level 4.	\$1.50/square foot
Distributor Level 5.	\$1.40/square foot
Distributor Level 6.	\$1.30/square foot

BannerFrame and BannerSpring perform well on all fabric graphics including PE, Backlite, Mesh and all vinyl weights.  
However, we have found 7 oz vinyl to be equally as durable as heavier substrates, yet easier for operations crews to work with due to the lighter weight.
